### RISK ASSESSMENT MATRIX.

|                  | Severity of       |                  |                    |
|------------------|-------------------|------------------|--------------------|
|                  | Outcome           |                  |                    |
| Probability of   | Slightly harmful. | Harmful.         | Extremely harmful. |
| Accident.        | (Low)             | (Medium)         | (High)             |
| Highly unlikely. | Trivial Risk      | Tolerable Risk   | Moderate Risk      |
| (Low)            |                   |                  |                    |
| Unlikely         | Tolerable Risk    | Moderate Risk    | Substantial Risk   |
| (Medium)         |                   |                  |                    |
| Likely           | Moderate Risk     | Substantial Risk | Intolerable Risk   |
| (High)           |                   |                  |                    |

### RISKS AND ACTIONS.

| RISK LEVEL  | ACTION AND TIMESCALE  |
|-------------|---|
| Trivial     | No action required.   |
| Tolerable   | No additional controls are required. Consideration may be given to a more effective   |
|             | solution or improvement.  |
| Moderate    | Efforts should be made to reduce the risk. Risk reduction measurers should be         |
|             | implemented within a defined period. Where the moderate risk is associated with       |
|             | harmful/serious consequences further assessment may be necessary to establish         |
|             | more precisely the likelihood of harm as a basis for determining the need for         |
|             | improved control measures.  |
| Substantial | The activity should not be started until the risk has been reduced. Considerable      |
|             | resources may have to be allocated to reduce the risk. Where the risk involves        |
|             | activity already in progress, urgent action should be taken.                          |
| Intolerable | Activity should not be started or continued until the risk has been reduced. If it is |
|             | not possible to reduce risk even with unlimited resources activity has to remain      |
|             | prohibited.   |
